## *LoRaWAN™ module*

RF Module optimized for very long range/low consumption applications. The LoRa™ technology provides ultra-long range spread spectrum communication and high interference immunity whilst minimizing current consumption

This module is particularly suitable for applications like Internet of things (IoT), sensor networks, environment, intelligent buildings, metering, security or M2M

This module is available as “Ready-to-use,” focuses on ease of integration even for non RF specialists, thus limit technological risks, while reducing the development time and cost

## *AE093-Evaluation Kit*

The AMIHO AE093 Evaluation Kit includes 2 Nodes and everything you need to help you develop and test your Smart Metering, IoT or other types of long range application. The Evaluation Kit supports LoRa™ and Wireless Meter Bus, both at 868 and 169 MHz, compliant with the EN13757-4:2013 Standard.

Get up and running quickly with the AE093 which provides both Hardware and Software Tools to help you evaluate, develop, test and debug your application to prove your concepts with minimum fuss. The Kit includes, 2x AE093 Evaluation Boards, Micro-USB Cables, 2x 868 and 2x 169 MHz Antennas, Batteries, our AMIHO PC Tool Software, a Quick Start Guide and Application Notes. The PC Tool offers you the flexibility to choose between a variety of command lines (AT-commands and Human-Readable), as well as a number of pre-set modes for Concentrator and Meter and Demo Applications (e.g. Meter Simulation) for quick and easy testing.

## AM091

The AMIHO AM091 module provides high performance with the combination of Wireless Meter-Bus at 169 MHz and long range LoRa™ capability, making it ideal for hard to reach meters and devices. Using NXP's Kinetis® family of MCUs, it is designed specifically for LoRa™ and Wireless M-Bus, but is also suitable for other ISM-band applications.

The AM091 is configurable for up to 700mW transmission power output. It comes supplied with AMIHO's EN13757-4 compliant fully-featured Wireless Meter-Bus and LoRa™ software stack and is also suitable for other 169 MHz ISM-band communications standards, e.g. KNX.

An Evaluation Kit, the AE093, is available with everything you need to get started and test our LoRa™ radio modules.

## AM093

The AMIHO AM093 is a versatile, high performance radio module providing both Wireless Meter-Bus and long range LoRa™ with dual channels at 868 and 169 MHz. It uses NXP's Kinetis® family of MCUs and Semtech's LoRa™ technology, allowing customers to prove their application.

The AM093 can be configured for up to 100mW transmission power output, low-power, embedded modem. It provides a highly integrated, high performance solution for sub-1GHz applications.

It is supplied with AMIHO's fully-featured, EN13757-4 compliant Wireless Meter-Bus and LoRa™ software stack and is also suitable for other 169 and 868 MHz ISM-band communications standards including KNX. The module uses an AT command interface and supports very low current standby for battery powered applications.

An Evaluation Kit, the AE093, is available with everything you need to get started and test our LoRa™ radio modules.

## AM094

The AMIHO AM094 module provides a highly versatile module with a unique combination of Wireless Meter-Bus, proprietary LoRa™ and LoRaWAN™ capability at 868 MHz, extending range to up to 15 km. Using NXP's Kinetis® family of MCUs, it is designed specifically for LoRa™, LoRaWAN™ and Wireless M-Bus, but is also suitable for other ISM-band applications.

The AM094 provides a high performance, cost-effective solution on our standard compact footprint (20.3 x 3 x 18.7 mm). It is configurable for up to 25mW transmission power output and is supplied with AMIHO's EN13757-4 compliant fully-featured software stack. The module uses an AT command interface and supports very low current standby for battery powered applications.

An Evaluation Kit, the AE093, is available with everything you need to get started and test our LoRa™ radio modules.

# Anylink Systems

*DP1276, SK1276*

The DP1276 includes the LoRa™ long range modem that provides ultra-long range spread spectrum communication and high interference immunity whilst minimizing current consumption. Using Semtech's patented LoRa™ modulation technique DP1276 can achieve sensitivity of over -137 dBm. The high sensitivity combined with the integrated +20 dBm power amplifier yields industry leading link budget making it optimal for any application requiring range or robustness. LoRa™ also provides significant advantages in blocking and selectivity over conventional modulation techniques. Solving the design compromise between range, interference immunity and energy consumption.

The SK1276 is an advanced development tool to kick start your wireless project. It is powered by a strong STM32F4 microcontroller to Support all kinds of applications what gives the developer high flexibility for possible applications. The board can be controlled via GUI, this Software is easy to use and offers a fast way to find the right RF Settings for a specific device. The second way of Controlling the DP1276 Module is changing and Debugging the firmware.

*ACW/LR8-DI, ACW/LR8-TM,  
ACW/LR8-TH & ACW/LR8-RS*

This autonomous modem allows you to indicate when the state of the digital Inputs changes, for example the opening or closure of a contact. The ACW-DI also allows you to remote read the water, gas and electricity meters consumption.

The ACW-TM « Temperature Monitoring» radio modem benefits from all the advantages of the new LoRaWAN™ network: low cost, autonomous, and immediately connected to the web

The ACW-TH modem « Temperature and Humidity Monitoring » benefits from all the advantages of the new LoRaWAN™ network : low cost, autonomous, and immediately connected to the web.

The ACW-RS « Serial port » radio modem benefits from all the advantages of the new LoRaWAN™ network: low cost, autonomous, and immediately connected to the web.

# Embit

## *LoRaWAN™ module*

EMB-LR1272 is a 868 / 915 MHz wireless module that combines high performance to small dimensions and low cost, providing the system integrator a simple and easy way to add LoRa™ connectivity and multi-hop networking into existing products

- output power can be set up to +19 dBm (79.43 mW)
- sensitivity up to -137 dBm
- extremely reduced power consumption in low
- power mode ( $\leq 1 \mu\text{A}$  in XLP sleep with a RTC clock running)
- open platform

The modules are provided with an embedded LoRa™ stack specifically developed by Embit that allows to be compliant with the latest LoRaWAN™ specs, allowing customer to develop firmware application and manage a compatible LoRa™ eco-system

The modules ship programmed with EBI LoRa™ which allows the customer to use the modules as a simple, ready-to-use modem (using AT-like commands over UART). The evaluation kit EMB-LR1272-EVK is strongly suggested to customers willing to develop their own firmware applications

## *LoRaWAN™ module iM880A-L*

The iM880A-L is a compact and low-cost radio module that operates in the unlicensed 868 MHz band and combines a powerful Cortex-M3 controller with the LoRa™ transceiver SX1272 of Semtech Corporation. The iM880A-L is pre-certified according the European R & TTE guideline and can be soldered like an SMD component. The iM880A-L can be ordered with a pre-programmed embedded protocol stack in two options:

**iM880A-L LoRaWAN™:** The LoRaWAN™ protocol stack, specified by the LoRa™ Alliance, is based on IBM's LMiC and IMST's WiMOD-OS. It comes with the WiMOD LoRaWAN™ HCI interface and allows easy configuration.

**iM880A-L\_LR\_Base:** This WiMOD Long Range firmware is a collection of functionalities and applications like Radio Link Test, Sensor App., Data Link Service, etc. embedded in our powerful WiMOD OS operating system. The WiMOD LR HCI interface provides to the user direct access to many radio parameters.

## *LoRaWAN™ module*

Microchip Technology Inc. The Embedded Control Solutions Company® is a leading provider of microcontroller, analog and RF semiconductors, providing low-risk product development, lower cost and faster time to market for thousands of diverse customers worldwide. Headquartered in Arizona, Microchip offers outstanding technical support along with dependable delivery and quality.

As a founder member of the LoRa™ Alliance, Microchip participates in the strategic, marketing and technical committees and is 100% committed to providing the 'golden standard' in LoRaWAN™ compliant end-node solutions.

The first products in the family are the RN2483 and RN2903 modems, which are pre-certified for the 434/868MHz EU bands & 915MHz FCC band respectively.

By integrating LoRa™ radio, PIC MCU and LoRaWAN™r1.0 class-A protocol stack, and with an easy-to-use high-level ASCII command set, these Microchip modems offer the quickest route to adopt LoRa™ technology.

## *MultiConnect® mDot™*

The MultiConnect® mDot™ is a secure, CE/FCC certified, ARM® mbed™ programmable, low-power LoRa™ RF module, that provides long-range, low bit rate M2M data connectivity to sensors, industrial equipment and remote appliances.

The MultiConnect mDot is LoRaWAN™ 1.0 compliant, providing bi-directional data communication up to 10 miles / 15 km line-of-sight and 1-3 miles / 2 km into buildings, using sub-GHz ISM bands in North America and Europe.

As the first ARM mbed Platform listed on mbed.org that is industry certified and deployment ready, applications can be written and compiled quickly online using developer friendly libraries, downloaded and hosted within the mDot. Decision making and control is distributed to the edge, enabling data to be more actionable without the heavy lift required to optimize RF performance, implement complex M2M middleware and security protocols needed to deploy a low touch install.

## *LoRa™ Demonstrator*

The LoRa™ demonstrator by ADEUNIS RF is a ready to use system, which provides connection to the any operated network using the LoRaWAN™ protocol. With 3 integrated sensors (GPS, accelerometer, temperature) this demonstrator allows to transmit and instantly view the radio frames on the compatible networks

This demonstrator is particularly suitable for the validation of applications like sensor networks, environment, intelligent buildings, metering, security, or M2M

These applications can thus be validated on site before the deployment of infrastructure. With built-in rechargeable battery, this demonstrator allows for many hours of use

## *Celsius Air Indoor*

The Celsius Air Indoor Sensor is a Low-Power, long range, LoRa™ wireless sensor that provides 0.25°C accurate temperature monitoring inside homes, office rooms, data centers.

Fully compliant with LoRaWAN™ 1.0 long range, Low-Power networks.

### Two modes

*Reporting mode:* Periodically measure and transmit the temperature sensor data every reporting interval (default is 10 minutes).

*immediate alert mode:* Short measurement interval (default 2 minutes) Immediate notification report when the temperature exceeds configured Low and High limits.

Cost effective: up to 10 years on a primary 3.6V AA battery, depends on parameter settings. Let our experts calculate the expected lifetime of your application.

## *Celsius Air Industrial*

The Celsius Air Industrial Sensor is a Low-Power, long range, LoRa™ wireless sensor that provides 0.25°C accurate temperature monitoring in freezers, fridges, and outside (IP65).

- Temperature range: from 35°C to + 85°C
- Resolution: 0.0625°C
- Accuracy:  $\pm 0.25^{\circ}\text{C}$  (typical),  $\pm 0.50^{\circ}\text{C}$  (max)

Fully compliant with LoRaWAN™ 1.0 long range, Low-Power networks.

Outdoor model: IP65

Two modes:

*Reporting mode:* Periodically measure and transmit the temperature sensor data every reporting interval (default is 10 minutes).

*Immediate Alert mode:* Short measurement interval (default 2 minutes). Immediate notification report when the temperature exceeds configured Low and High limits.

Cost effective: up to 10 years on a primary 3.6V AA battery, depends on parameter settings.

## *Pirio Indoor*

The Pirio Motion Sensor is a Low-Power, long range, LoRa™ wireless sensor that detects the presence or absence of occupants in any space. The ultra Low-Power passive infrared (PIR) motion sensor detects occupants' presence by sensing the difference between heat emitted by moving people and background heat.

Accurate occupancy monitoring

PIR

range	94° x 82°
distance	5m
zones	64 zones
detectable	4°C between target and background
timeout	30 seconds, If motion is detected the
interval	sensor stops counting for the
	configured timeout interval

Class A device, fully compliant with LoRaWAN™ 1.0 LoRa™ networks.

Two modes: Reporting mode and Immediate Alert mode.

# Homerider Systems

## *Water meter sensor*

HOMERIDER has developed integrated end points (Water Trak) in partnership with manufacturers of water meters: Actaris/Itron, Sappel, Elster, and Sensus. It should be noted that the generic remote module the Pulse Trak, can be installed on nearly any intelligent meter: pulse entry, serial interface, so open collector, ...

The modules provide comprehensive data to meet needs for meter management, network and consumption supervision:

- Up to 96 indexes per day
- Maximum & minimum debit by 6 hour slot
- Back flow: Number, Volume
- Stopped period
- 28 day consumption histogram
- Continuous flow by debit period
- Alarms: leaks, back flow, battery, fraud.

The flexibility of the HOMERIDER AMR system and data management is exceptional. Costs of meter reading and customer support can be significantly reduced. The grounds for customer contention are considerably reduced as are water losses due to rapid detection of leaks and over consumption

## *LoRaWAN™ USB stick iU880A*

The iU880A is a compact and cost-effective USB adapter based on the Long Range Radio Module iM880A-L. It provides an adjustable output power of up to +18 dBm (EIRP). USB to UART Bridge Virtual COM Port (VCP) drivers for Microsoft Windows, WindowsCE and Linux are available. It can be ordered with a embedded protocol stack in two options:

iU880A\_LoRaWAN™; the LoRaWAN™ protocol stack, specified by the LoRa™ Alliance, is based on IBM's LMic and IMST's WiMOD-OS. It enables Low Power Wide Area Networks (LPWANs) for Internet-of-Things (IoT) and Machine-to Machine (M2M) applications and supports Direct or Over The Air (OTA) activation. It comes with the WiMOD LoRaWAN™ HCI interface and allows easy configuration

iU880A\_LR\_Base; the WiMOD Long Range firmware is a collection of functionalities and applications like Radio Link Test, Sensor App., Data Link Service, etc. embedded in the powerful WiMOD OS operating system

## *Tracking product and OEM modules*

Design and manufacturing of CLICKEY devices and OEM modules for the consumer- and business market. End-to-end (tailor-made) solutions supported by our cloud portal and usage of our front-end interfaces, dashboard, API's and APP's

CLICKEY is a smart compact 2-way transponder that transmits its position 6 times per hour to a central server and to the mobile application of the owner. CLICKEY does not have to be recharged as the battery will last for more than 1 year. The current position is shown on a digital map of the smartphone of the owner. For tracing of small objects the user can zoom in and activate the audio signal of the CLICKEY for recovery

A Clicky has an integrated Bluetooth Low Energy (BLE) module, which can be activated by the smartphone of the owner

## *CLICKEY-TEMP SENZ; LoRa™ Temperature Logger*

This compact stand-alone LoRa™ temperature sensor monitors temperature in a range of -30°C to +100°C with 0,1°C accuracy. Programmable interval upload of Min, Max and Average temperature. Alert on programmable warning threshold temperature value. Powered with replaceable coin battery for upto 2 years of operation (subject to interval. Internal antenna for optimal gain.

CLICKEY's are made in Europe by INVENIT and offer maximum price quality ratio.

CLICKEY's are combined with use of International CLICKEY Cloud Portal for Dashboard and/or smartphone APP. Signal strength and battery status are indicated in CLICKEY APP

## *Den – Domestic Smoke Detector*

Den is the world's first LoRaWAN™ domestic smoke detector. It has been developed to address two customers' requests

- the obligation to be equipped with a smoke detector in numerous countries (by law or due to the insurance's request), or the need to be safe in other countries
- the wish to be notified as soon as smoke is detected for peace of mind

Because, 1 in 2 fires is caused by electrical failure, power usually goes out, along with the local internet connection. The only way to have a reliable link is to use a self-powered internet link, making use of the LoRaWAN™ Network

Den is equipped with a temperature and humidity sensor, allowing the user to keep track of the indoor air quality

Upon online registration, the user has access to the status of the detector, and the air quality indexes. One can set up scenarios and receive notifications when the temperature drops too low

*Trust iSecur for your safety, patent pending*

## *Ventilation winch sensor*

The cost of leaving vents opened and unattended topped 200M€ last year in France only. This total cost includes damages due to water leaks, weather, intrusion, etc. With real time information, corrective action can be decided, therefore reducing drastically the costs

Tomorrow you will find the LoRaWAN™ Vent Winch everywhere from superstores, to your building stairwell. Building managers and safety officers will be notified in real time every time someone opens a vent for ventilation and leaves it opened

The winch will also send a notification if maintenance has not been done after a pre-determined amount of time

## *LoRa<sup>™</sup> Tool*

Keep an eye on (electrical) equipment and be warned when one of them is down

This basic and universal intelligent device can add remote control to virtually any equipment. Monitoring a complex site or a plant with a few LoRa<sup>™</sup> “Tool” allows management to react to any failure ASAP for very little money and without adding expensive pieces of equipment. Possible applications include distant supervision of small stores (fridge, door sensor), local equipment rooms for water utilities or phone companies

The LoRa<sup>™</sup> “Tool” can be operated by an external power chord as well as a battery inside. It includes:  
- 2 IN (including 1 analogic input in a future version)- 1 OUT 24V or a 4-20mA

## *Pressure sensor*

Be warned when pressure drops in your pipes

This pressure control module allows you to know in real time if pressure drops below a certain level. These modules will allow you to keep an eye on fire hose cabinets, gas pipes, liquid pipe systems, water pumps etc.

Set it up on your pipe system and the module will run on a battery for over 10 years

Different versions will be available: the basic version will tell you if the pressure is sufficient or not, while the advanced one will allow you to follow accurately the pressure in the pipes. Different versions will be available for different pressures. Trust iSecur for your safety, patent pending

## *Waspote Plug & Sense*

Ready to install and easy to deploy, each Waspote Plug & Sense! node is equipped with six connectors to which more than 80 different sensor probes can be attached directly, allowing services to be scalable and sustainable. The Waspote Plug & Sense! platform may be solar powered to allow energy harvesting and years of autonomy.

Waspote Plug & Sense! models are pre-configured to create such widely applicable services to the Internet of Things, as Smart Cities, Smart Parking, Pollution Control, Air Quality, Smart Water, Smart Agriculture, Security, and Ambient Control, out of the box. Waspote Plug & Sense! sensor nodes are ready for deployment anywhere in the world, in terms of available radio frequencies (868-900-433 MHz) and certification (CE, FCC, IC).

## *Waspote LoRaWAN™ Module*

Libelium provides a ready-to-use LoRaWAN™ module so that system integrators can create reliable solutions for any application of the Internet of Things, such as Smart Cities, Smart Parking, Pollution Control, Air Quality, Smart Water, Smart Agriculture, Security, and Ambient Control.

Thanks to an easy-to-use and high-level API, comprehensive documentation and useful code examples, developers are able to implement worldwide projects, covering three different bands: 868 MHz in Europe, 915 MHz in the U.S., and 433 MHz in China, Japan and Korea.

Its standard form-factor makes this module compatible with popular platforms like Arduino, Raspberry Pi or Waspote, and allows universities, researchers and makers to develop their own Low-Power Wide-Area Networks and DIY projects.

# Mueller Systems

*LoRaWAN™ sensors and water management solutions*

## Mueller Systems Mi.Net AMI System

When you are ready for a true two-way AMI system, the Mi.Net® Mueller Infrastructure Network for Utilities is your ideal solution

The Mi.Net System is a communications network that fully automates the meter-reading-to-billing process, linking meters, distribution sites and control devices in a single, highly efficient data network

The Mi.Net System is flexible and scalable, enabling utilities to deploy newer technology in stages, as their needs and budgets allow

The Mi.Net System uses Mi.Node transceivers on metering devices to gather and pass data through radio frequency technology to area Mi.Hubs. These gateways collect and upload the data to either the utility's server or our hosted server with Mi.Host MDM software via GPRS or other data back-haul options

The many benefits of the Mi.Net System include “On Demand” meter readings, e-mail alerts and alarms based upon near real-time information, and the ability to best manage your water resources through on-going access to custom data and information

## *LoRaWAN™ Sens'O sensor*

Sens'O is a clip-on module that fits on top of water meters

It uses an optical sensor to read the meter cycle rotation and count the number of rotations and store the number.

It transmits regularly, depending on configuration, the following information

- Meter index
- Reflow
- Leakage alarm
- Battery low level alarm
- Tampering

For one transmission per day, battery life expectancy exceeds 12 years

# Solvera Lynx

*ComBox.L are innovative wireless sensors for today's energy management*

They use LoRaWAN™ and cover a wider range of innovative IoT applications in Home, Building and Factory Energy Management, Smart Metering, Smart Grids and Smart Cities.

PULSE SENSOR (ComBox.L CI) could be used with any meter with a pulse signal output (*like electricity, gas, water, heat*).

STATE SENSOR (ComBox.L DI) could be used with any system that has an on/off output signal (*like door switch, relay output, push button*).

TEMPERATURE SENSOR (ComBox.L 2T) can connect up to two temperature probes (PT1000).

ANALOG GATEWAY (ComBox.L AI) can connect up to two sensing probes with 4..20mA or 0..10V output (*like pressure, flow probes*).

MODBUS GATEWAY (ComBox.L MB) can read intelligent devices with RS-232 output which provide Modbus protocols.

ACTIVATION MODULE (ComBox.L S0) contains output for remote activation / deactivation.

*GemaLogic*

GemaLogic is a powerful tool for energy management, which enables the users to reduce their energy costs. It is suitable for industrial, commercial or public companies regardless of its business or size. It brings state of the art solutions for energy data acquisition and monitoring, energy data analyses and implements continuous improvements in energy efficiency.

GemaLogic is built as SOA enterprise architecture consisting of database, application server and various client applications. It could operate on almost any operating system (Windows, Linux) and supports all major database vendors (Microsoft SQL, Oracle, PostgreSQL, MySQL, DB2). As a web server application, It can be implemented as a service in the cloud (SaaS) or as an integrated system installed at customer's premises.

- energy data analyses
- customised reports and dashboards:

# TE Connectivity Sensor Solutions

## *LoRaWAN™ sensors*

TE Connectivity is a global technology leader. We design and manufacture highly engineered connectors, sensors and electronic components essential in our increasingly connected world

TE Connectivity provides solutions for

- Pressure sensors and load cells
- Temperature, humidity and heaters
- Position, rotary and tilt
- Vibration and optical sensors
- Piezoelectric sensors

# Telog Instruments

## *Wireless Water Infrastructure sensor*

Telog offers a wireless monitoring application solution for every sensor, meter and instrument found in remote water distribution and wastewater collection system

Telog's LPR-41 Line Pressure Recorder is a compact (1.8" height, 2.8" diameter) unit that attaches to a ¼" NPT fitting. The unit records and monitors pressure in underground vaults anywhere within a water distribution system

The LPR-41 is the flagship product for Telog's new 4000 series Recording Telemetry Units (RTUs). The 4000 series with embedded LoRa™ Long Range spread spectrum radio technology provides reliable, low cost, 10 year battery powered monitoring solutions for water system pressures, flows, levels, pump activity, water quality, overflows and other applications

Telog's host application and Cloud platform provides you with access to historic and real-time alarm events via website. Operating in a MS Windows environment data is readily shared with 3rd party data management platforms

# Turbo Technologies

## *LoRaWAN™ sensors and applications*

TBM-N100M module is customizable in shape and size. Integrated data collection device for sensors and wearable's

- Wireless transmitter, MCU and flash integrated
- Ultra-low power consumption design, 500nA while sleep
- SPI/I2C/UART/Bluetooth supported

TBM-N100C is a wireless transmit module designed for geomagnetic detector information. Real-time transmit vehicle's type, speed, flow rate and status of parking space, longer than 5 years battery life

TBM-N100B is a wireless transmit module designed for power meter information, interface protocols compatible with Chinese power grid transmission standard. Transmits multiple parameters for water meter & gas meter solutions

## WS LR PULSE

WS LR PULSE metering sensor is designed for automatic meter reading system (AMR).

It is compatible with any meter delivering a pulse output.

It can also monitor any binary signal for application such alarm detection, push button.

This sensor is integrated in IP65 plastic housing and features:

- LoRaWAN™ protocol stack
- Long Life Battery
- Configurable pulse interface

### LoRaWAN™ Ready

Yes

### Radio Regions

Europe 868 MHz

## *LoRa™ IoT base station*

This Internet of Things (IoT) Access Point/ Gateway is specifically designed for wide area smart city applications

Applications include, but not limited to automatic meter reading, monitoring fault indicators, monitoring street lights, etc.

Typical deployment is using star network configuration similar to mobile network base station

Because of its long range and many device capabilities, it is a much more cost effective way for service providers to deploy this for sensor networks compared to deploying a GPRS network for sensor network applications

# Gupsy

## *Base station Gupsygate*

Gupsy introduces a new gateway dedicated to the Internet of Things: GupsyGate. It is a powerful LoRaWAN™ compliant gateway for IoT applications. Radio ranges are possible up to 15 km. Line of Sight and 1 km in urban areas

Network connectivity is possible via 4G, 3G, Wi-Fi and Ethernet. 3 USB ports are available for connectivity with peripheral devices

GupsyGate is powered by an ARM Cortex A9 application processor with up to 4 cores, 4 GB of RAM and 64 GB of flash memory + a µ-SD card slot, and supports several flavors of Linux. Apart from the LoRaWAN™ software also other powerful applications can be run from the gateway

Gupsy has a strong experience with sensors (IEEE 802.15.4) used in pest control and food safety applications for temperature and humidity measurement, radon detection and animal tracking

## *LoRa™ IoT base station*

The Long Range IoT Station is a terminal designed to meet M2M & IoT connectivity service providers that want to operate their network by themselves

The Station incorporates the Long Range LoRa™ technology developed by Semtech and communication functions (Ethernet and 3G)

Thanks to a rugged case - IP 67 -, LoRa™ IoT Station can handle with harsh installation environments (moisture, dust, wind...)

Installed on the relay antenna of a telecommunications operator, on the roof of a building or a water tower, it can establish bidirectional communications with several thousands items of intelligent equipment (sensors, meters, connected things) which are several kilometers away

# Manthink Technology

## *LoRaWAN™ module*

The LW401 of Manthink is a transparent transmitting module based on SX1278 with the characteristics of long-range, low-power and high sensitivity for the Chinese market.

Module supports LoRaWAN™ public protocol. Users could configure the running baud rate and frequency of the module. The module could satisfy the need of concentrator and collector in AMR applications by the private protocol. The module also resolves the collision and avoidance in different metering area.

Commands of LW401 are divided into MAC and protocol layers and the command of the MAC layer is hidden for users. Its main achievement is solving the conflict between different metering areas. The main application areas are industrial instrumentation (water, electricity, gas and heat meter data transmission), the smart traffic and agriculture.

*MultiConnect® Conduit™*

MultiConnectR Conduit™ is the industry's most configurable, manageable, and scalable cellular communications gateway for industrial IoT applications. Network engineers can remotely configure and optimize their Conduit through DeviceHQ™, the world's first IoT Application Store and Device Management platform.

The Conduit features two accessory card slots that enable users to plug in MultiConnectR mCard™ accessory cards supporting their preferred wired or wireless interface to connect assets locally to the gateway. Available options include a LoRaWAN™ mCard capable of supporting thousands of MultiConnectR mDot™ long range RF modules connected to remote sensors or appliances.

The Conduit's flexibility supports a myriad of customer LoRa™ use cases providing support for both IBM's Node-RED, a graphical interface and mLinux™ Open Embedded/Yocto development environments. The Conduit is ideal for private and public LoRa™ deployments, Actility, Orbiwise, Senet, and Lorient.io.

## *Cisco IR910*

The Cisco 910 Industrial Router is part of the Cisco 900 Series Industrial Routers Family. This rugged IoT gateway can aggregate both the wireless sensor networks (WSN), including Low Power WAN (LPWA) technology such as Semtech® LoRa™ and wired sensors and ties them into an IP network. Offering an open hardware and software platform, the IR910 can quickly and easily host partner applications and sensor communication cards. Use the IR910 for local WSN management, raw data collection, caching, processing, and forwarding to data center in the cloud through a variety of WAN IP interfaces.

# IBM Research

## *Long Range Signaling and Control (LRSC) network server*

IBM LRSC is a deployment-ready set of software components to operate a LoRaWAN™ network. Current information about LRSC is made available at <http://lrsc.ch>

LRSC is a scalable, end-to-end cloud solution for operating a LoRaWAN™ network - a network of gateways and end devices equipped with a LoRa™ radio. It is designed to operate a nationwide telecommunication grade deployment, but can be scaled down to run smaller private networks

For end users and developers, the system is designed to be quick & easy to adapt. All the client software is available as examples, and the LoRaWAN™ device implementation is open source under EPL

# LORIOT

## *LoRaWAN™ Application Server*

A scalable, resilient LoRaWAN™ Network Server with strong focus on security and distributed operation. An all-in-one solution for LoRaWAN™ network operations / control center.

Features flexible, modular data output interfaces currently include HTTP / REST, WebSocket, TLS Socket, MQTT, CoAP and a number of 3rd party services such as PubNub, IBM Bluemix or Amazon AWS IoT. Output of the LORIOT Network Server can be directly tied to LORIOT Application Server.

Web interfaces are available for

- gateway management and monitoring
- application and device management and monitoring
- network operation and network diagnostics
- billing records and device subscription management
- sample end-user interface (device provisioning, data retrieval )

Most of currently available LoRa™ gateways are already pre-integrated. Number of end-to-end applications are available out-of-the-box through our partner network. A free, generally available trial account is available for gateway owners.

# LORIoT

## *LoRaWAN™ Network Server*

A scalable, resilient LoRaWAN™ Application Server with strong focus on security, big data storage, real-time data analysis and distributed operation. A solid foundation for end-to-end LoRa™ application.

API access allows simple interfacing with existing infrastructure or rapid development of custom front end. A flexible data parsing and processing engine allows for server-side data transformation and outputs well-formatted data to existing systems with minimum or no adjustments needed.

Web interfaces are available for

- user roles, access rights, authentication and authorization
- definition of payload parsers
- data retrieval (real time and historical)
- device provisioning, including meta data storage
- device monitoring
- seamless integration of non-LoRaWAN™ data inputs

Numerous payload parsers are available out-of-the-box for our partner solutions. Application Server can be directly connected to the output of LORIoT Network Server.

# Orbiwise

## *LoRaWAN™ network server*

Complete network software solution for LoRa™ based networks.

The solution includes, among other features:

- A network server, supporting all features of the LoRaWAN™ 1.0 specification
- An O&M tools suite for the operation and management of the entire network from a web-based interface. Includes extensive network debug capability.
- A Data Access Sub-system, with REST based APIs towards application servers and additional interfaces for network operator and customers

The solution already supports multiple commercially-available LoRa™ gateways.

Extensive interoperability testing conducted with different device types and protocol stacks available on the market.

# SICONIA™

## *LoRa™ Network Server (SLNS)*

Based on our recognized & successful expertise in developing & deploying front end servers for nationwide utility deployment, SAGEMCOM continue to propose highly scalable, modular, robust and secure Core Network solutions, called Siconia™ LoRa™ Network Server (SLNS), fully compliant to LoRaWAN™ 1.0.

Our cost efficient solution is fully relying on Virtual Machines (VM) architecture, whilst offering full range of Carrier grade features, such as Application & system management (*Data collection, Gateways Management, provisioning, Alarms & faults, Network supervision, Radio supervision, device supervision, Gateway & device SW Mgt*), Engineering tools (*radio planning, radio optimization, RRM*), Security (*KMS interface, OTA provisioning, GW Authentication, SSL, CMP*).

Our Siconia™ LNS is already deployed by Tier-1 Operator for nationwide roll-out, and several Trials worldwide, whilst running with many different LoRaWAN™ devices from the Market.

## *LoRaWAN™ IoT platform provider*

Our platform is a cloud-based service that empowers our clients to increase operational efficiencies and launch new services and products based on IoT capabilities—all from a single platform. The platform collects and aggregates data from potentially millions of assets that operate on different communication networks or use different protocols for communication, and makes that data available across business areas, applications and services, enabling new ways of doing business and process improvements

As assets transfer data to the platform, it processes the data and either stores it for later retrieval or distributes it to business applications for conversion into valuable business information that drives innovative products and services. The platform provides an open application programming interface (API) that allows for easy application integration, thus creating an interconnected ecosystem of devices and services

In addition, the platform provides supporting data services such as data analytics, data modeling and event processing

# IMST

## *LoRaWAN™ Certification*

The LoRaWAN® certification is first of all a protocol check of any class A device (class B and c will be covered in future) against the LoRaWAN™ specification. The following test cases are currently covered:

- OTA Activation
- Activation by personalization
- Frequency Hopping
- Data Rate Adaptation
- Transmit Power Control
- Packet Error Rate
- Confirmed Packet
- Frame Sequence Counter Check,
- 2nd Receive Window Test
- Cryptography Test
- Add Modify Channel Test
- Retransmission Test
- Rx Timing Sensitivity Test.

The report comes with qualitative and quantitative results and can be used to gather the LoRaWAN® certification from the LoRa™ alliance. If any DUT dependent failure occurs within the testing, our experienced test centre staff provide support to identify and solve the problem.

# Select Software Solutions

*LoRaWAN™ solution provider*

For two decades our business has specialized in large volumes of transactions with full validation, reconciliation, rating, tariffing and billing. The Selcomm Suite from Select Software – IOT Billing has withstood the challenge of billing enormous volumes of data efficiently, quickly and accurately. Our solution and support provide you with flexible, robust and scalable solutions for competitive edge and rapid time to market.

The Converged Billing and BSS handles every element of Device Management, Charging, Billing, Ordering, Provisioning, Customer Care, Dealers, CRM, and integration with existing enterprise solutions - worldwide. We provide services to incorporate multiple vendor solutions to meet your business needs exactly.

Crucially, we provide Billing and Customer Care services to the exact degree needed, integrating with your existing systems to ensure the smoothest and most cost effective outcome. Whatever you need, we provide it – one, some, or all elements.
